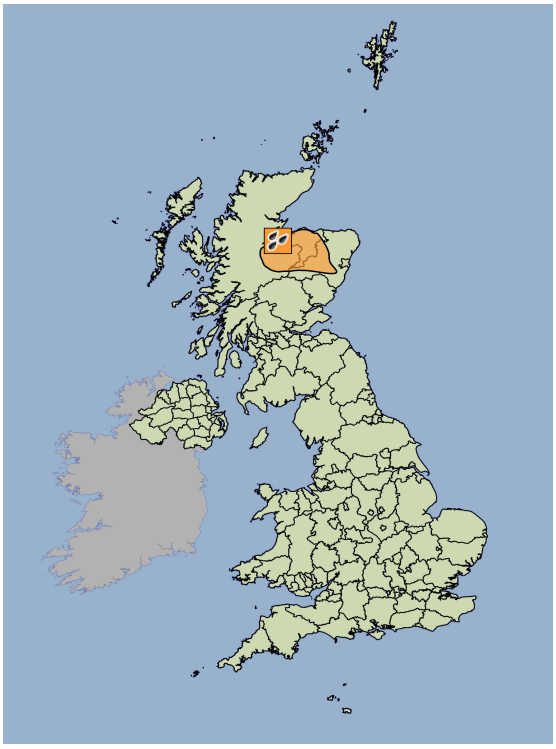
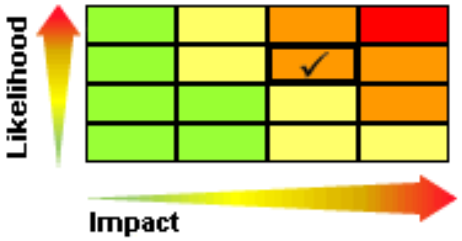
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep area of low pressure will move into the North Sea and intensify on Sunday night and into Monday. Its associated fronts will become slow-moving across Scotland and bring persistent, heavy rain to some areas. Across the amber area, over 100 mm rainfall is possible in less than 24 hours, leading to a risk of flooding.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **00:00 on Mon, 11th Aug 2014** until **12:00 on Mon, 11th Aug 2014**

Rain spreading into northern and eastern Scotland is expected to be heavy and prolonged on Monday, particularly during the morning within the amber area.

The public should be prepared for some disruption to transport with localised flooding likely. Outdoor activities will also be hazardous due to heavy rain combined with strong winds.

This is an update to the warning to expand the amber area, mainly towards the east.
